COMPANY INTRODUCTION

_01

Leading Italian manufacturer of high performance industrial electric motors, Oemer motori elettrici s.p.a. is operating since 1949 in Rescaldina (Milan), in Italy.

Highly qualified staff, advanced technology and continuous investments in systems and devices, together with flexibility in the production, are the factors which within a short period enable manufacturing new products with high quality standards and elevated reliability.

75th year of activity since 1949

MILESTONES

_01

Construction of a **new plant** in Rescaldina.
Relocation of the entire **production process** to the site.

Development of the **QCA-VS-VM** servomotor series.
Expansion with a renovated **testing room** and **CNC** machine tools.

Development of **LQ** liquid-cooled motors and **QLS** servomotors.
Expansion with a **new plant** and machine tools processes.

Development of **QSR** synchronous reluctance motor series.
Implementation of **digital systems** for production monitoring.

2000

2010

2020

Foundation of the company in **1949** and beginning of the **electric motors production** for industrial applications.

Development of **QCC** square frame DC motor series.
Beginning of participation in national **trade fairs**.

Development of **QL - QLa** high performance AC motor series.
Launch of international **commercial partnerships** (Europe, USA, Asia).

Development of **LTS** torque motors and **QS** servomotor series.
Consistent participation in international **trade fairs**.

HIGH PERFORMANCE ELECTRIC MOTORS

The production capacity includes a complete range of AC 3-Phase inverter duty motors characterized by high power density, fast dynamic response and compact dimensions.

All series of the production range are designed to guarantee high reliability and flexible configurations.

PRODUCT CERTIFICATION

The motors can be supplied with various product-specific certifications such as:

→ CE

(European Economic Area) Harmonized standards for rotating electrical machines. Standard for all motor series and sizes

→ cURus

(USA & Canada) Available on request for the complete motor or for the insulation system only depending on the series and size requested

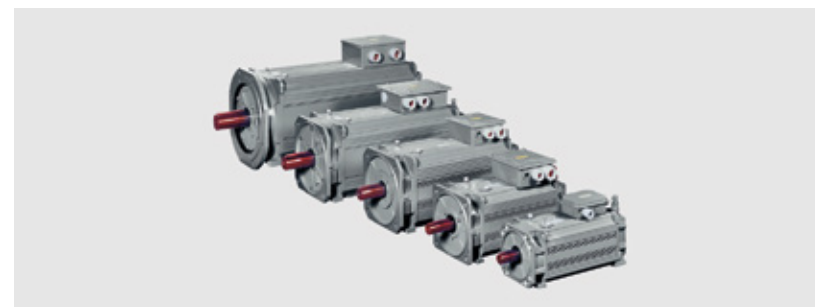

→ EAC

(Eurasian Economic Union) Available on request for the complete motor depending on the series and size requested

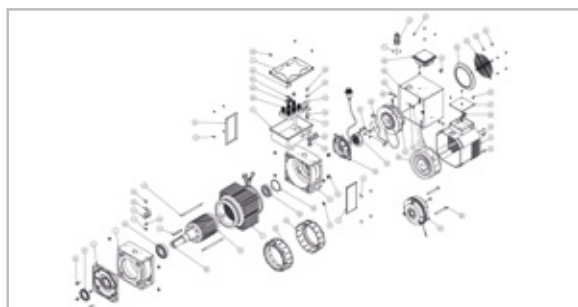

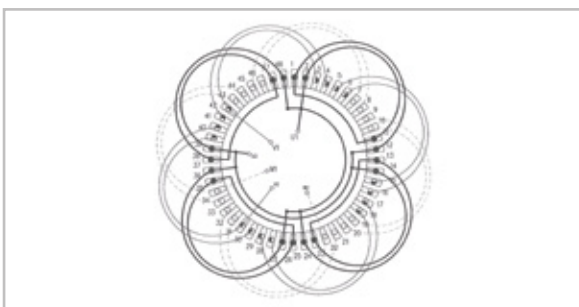

PERFORMANCE AND TECHNOLOGIES

	POWER RANGE	TORQUE RANGE
Induction asynchronous motors	0,5 - 1115 kW	8,5 - 6700 Nm
Permanent magnets synchronous motors	1,7 - 200 kW	22,9 - 2100 Nm
Direct drive torque motors	2,5 - 496 kW	114 - 14046 Nm
Synchronous reluctance motors	0,32 - 426 kW	4,3 - 2486 Nm

HIGHLY CUSTOMIZED SOLUTIONS

Thanks to the know-how acquired in over 75 years of activity in the field of electric motors and to the direct control on the entire production process, the company is specialized in the design and implementation of customized solutions both from an electrical and mechanical point of view.

ELECTRICAL FEATURES

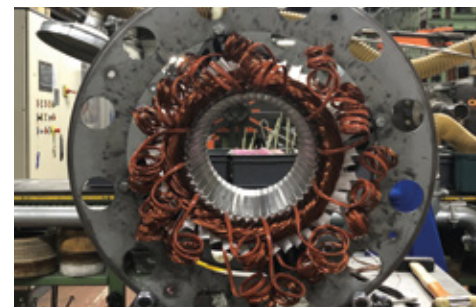

- Windings customization according to the application requirement
- Rated voltage range from 170 to 690V
- Optimization of rated current for best match with inverter drive size
- Wide availability of probes and sensors

MECHANICAL FEATURES

- Cooling system, protection degree
- Shafts, flanges, bearings
- Brakes, blowers
- Feedback systems, sensors
- Terminals, connectors
- Construction materials, treatments

TECNICAL SUPPORT

Given the significant experience in the most diverse industrial sectors, the company is able to provide maximum technical support regarding the motor sizing and the configuration of additional options and accessories based on the application required by the customer and the environmental conditions.

1.
Dedicated winding
insertion

2.
Splined hollow shaft,
B14 custom flange

3.
Brake and safety
encoder mounting

MOTORS FOR PRODUCTION MACHINES

_03

PLASTIC AND RUBBER

- ▶ Extrusion lines
- ▶ Calenders
- ▶ Winding equipment
- ▶ Mixers and shredders

METAL PROCESSING

- ▶ Strips and tubes processing lines
- ▶ Metal forming machines
- ▶ Wire/cable processing machinery
- ▶ Machine tools spindles

PAPER, TISSUE AND CARDBOARD

- ▶ Converting lines
- ▶ Sheetters
- ▶ Paper pulpers
- ▶ Printing machinery

TEXTILE INDUSTRY

- ▶ Textile machinery
- ▶ Fabric dyeing and finishing equipment
- ▶ Nonwoven processing lines

STONE, CERAMIC AND CONCRETE

- ▶ Milling, polishing, sawing machines
- ▶ Forming presses
- ▶ Mineral wool processing lines
- ▶ Mixers and crushers

WOOD PROCESSING

- ▶ Veneer processing lines
- ▶ Milling, turning, sawing machines
- ▶ Board and panels finishing lines
- ▶ Shredders and chippers

MOTORS FOR INDUSTRIAL SYSTEMS

_03

PACKAGING

- ▶ Laminated and labels processing
- ▶ Forming and die-cutting machines
- ▶ Automated packaging machines

LOGISTIC

- ▶ Intralogistic handling equipment
- ▶ Hoisting machinery
- ▶ Cable transport system

ENVIRONMENTAL TECHNOLOGIES

- ▶ Recycling and waste processing machines
- ▶ Fluids treatment systems
- ▶ Power generation installations

TESTING

- ▶ Vehicles test stand
- ▶ Test benches for mechanical, electromechanical components
- ▶ Stand-alone testing machines

MARINE APPLICATIONS

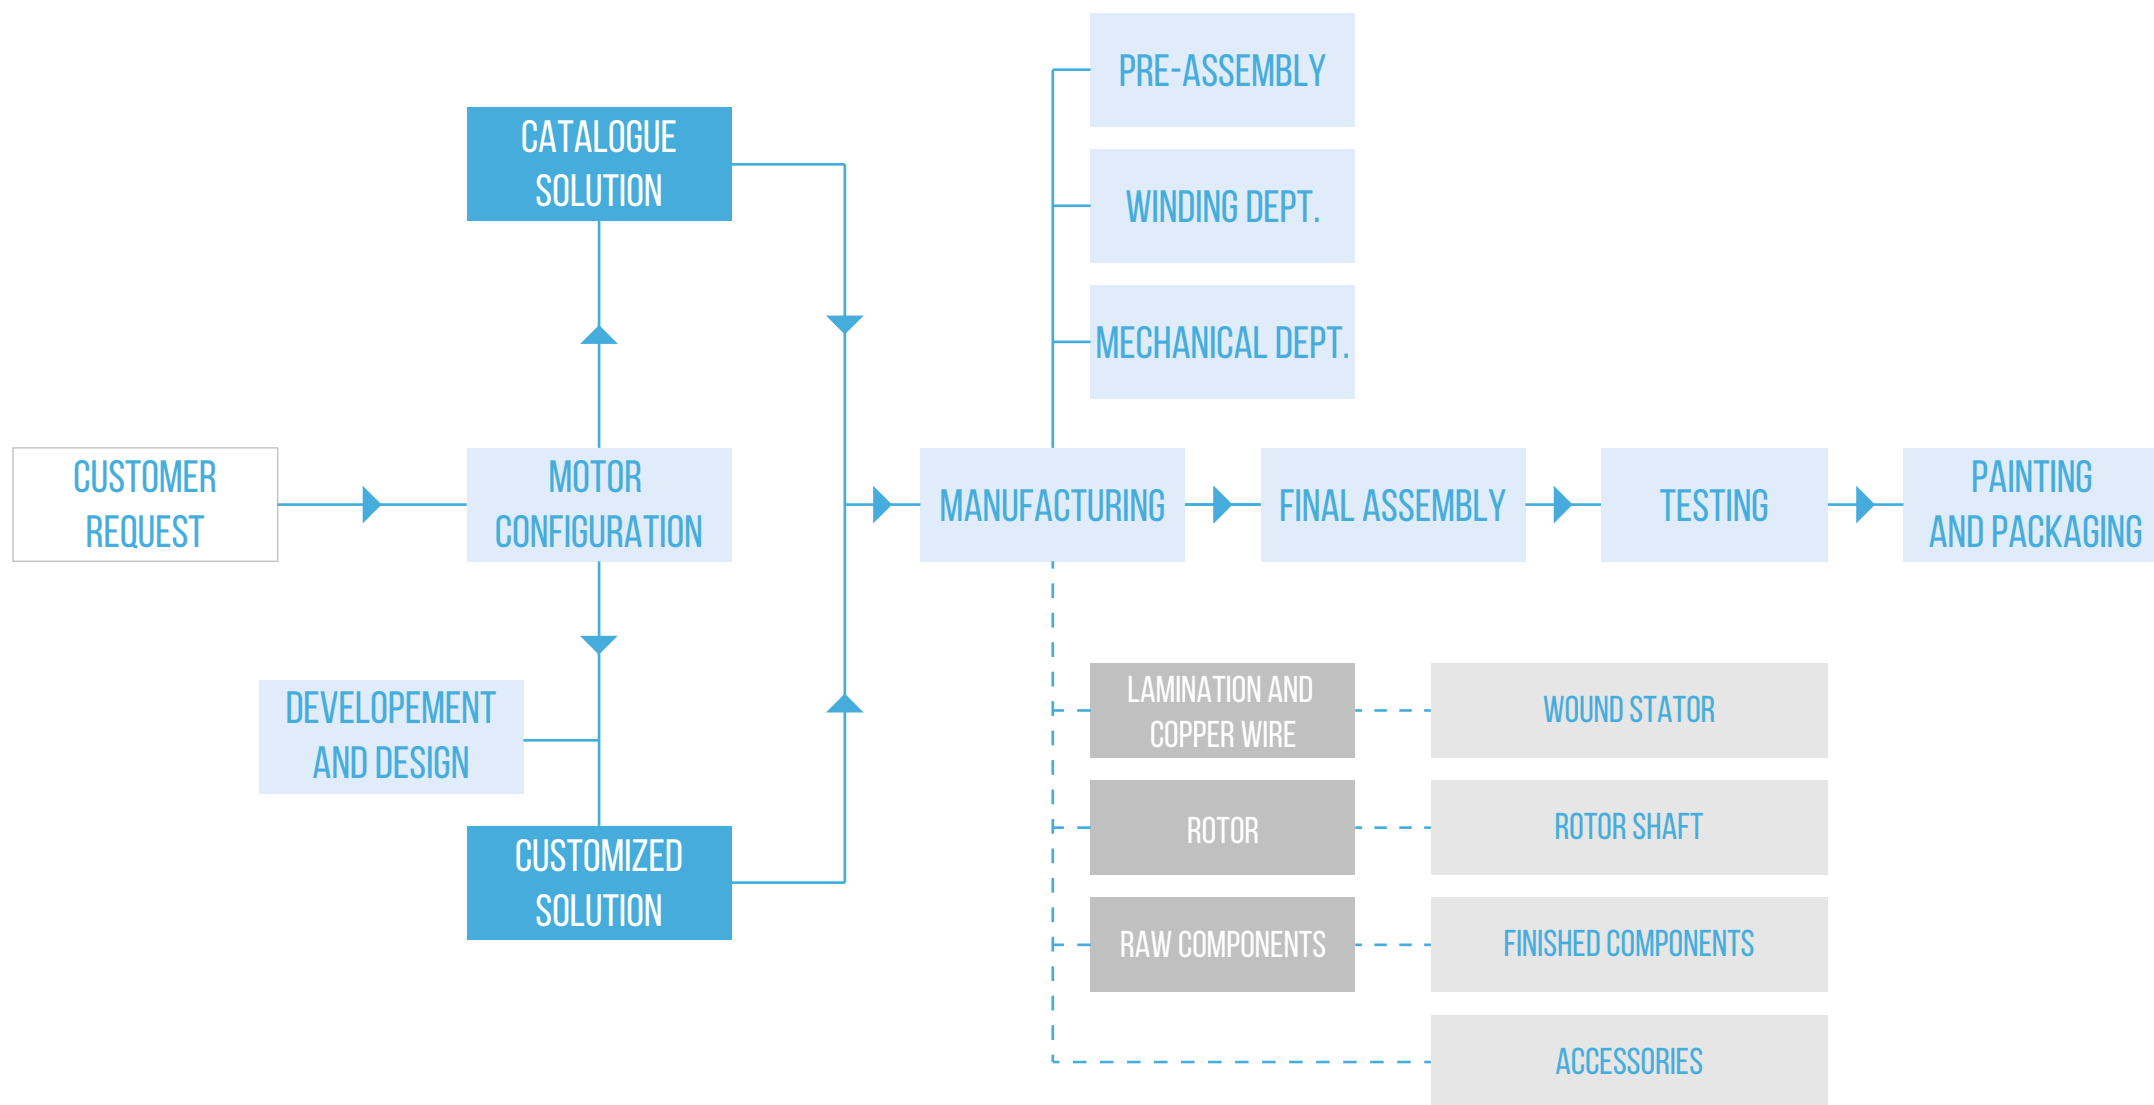

- ▶ Main propulsion & power generation
- ▶ Maneuvering, stabilising equipment
- ▶ Hoisting, handling equipment
- ▶ Waste processing machines

VEICLES AND MOBILITY

- ▶ Main traction & power generation
- ▶ Steering systems
- ▶ Work equipment for industrial vehicles

IN-HOUSE PRODUCTION PROCESS

_04

MECHANICAL DEPARTMENT

_05

The company has a wide variety of machines capable of performing all the mechanical processes necessary to manufacture internally the main motor production components such as rotor shafts, flanges, shields and casings. The conformity of the raw components received is verified during the incoming material inspection.

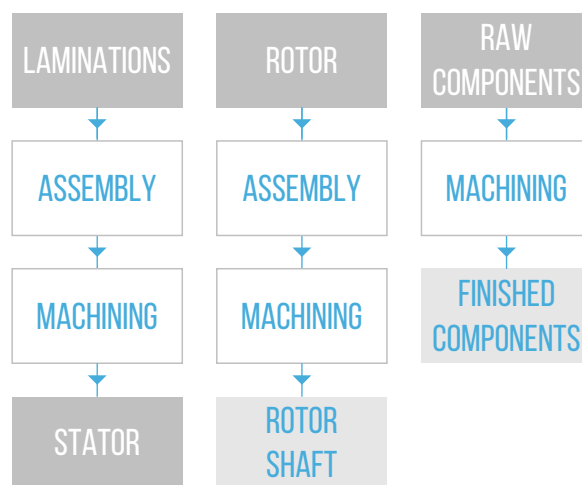

RESOURCES

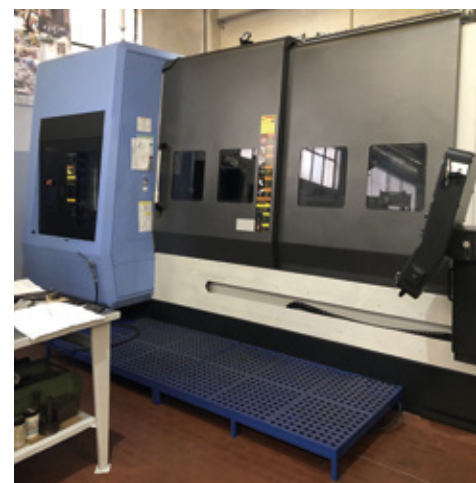

- Automatic punching stations
- Welding department
- CNC drilling and milling machines
- CNC grinding machines
- Turning centers and CNC lathes

PRODUCTION FLEXIBILITY

The diversified machinery are suitable for both mass production of large batches and dedicated executions of a few complex units.

1.
Multi-pallet machine tool

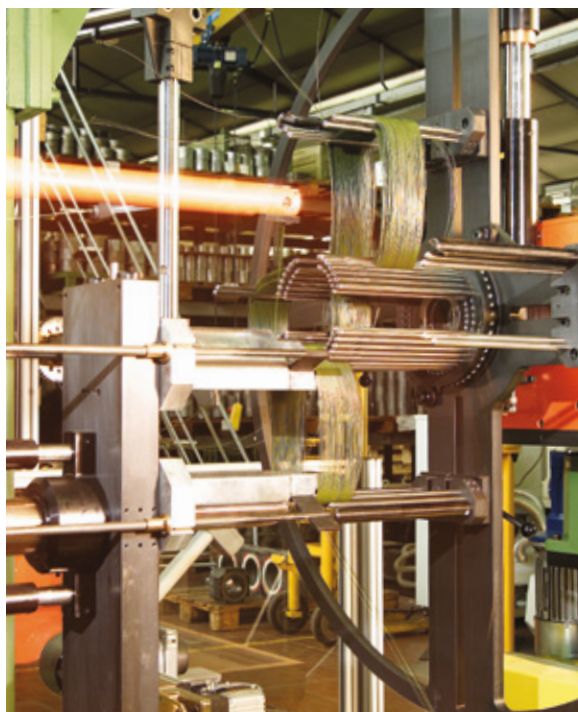

2.
Horizontal turning center

WINDING DEPARTMENT

_05

A series of automatic machines allow the materials to be set up with efficiency and precision ensuring the serial repeatability of the preparation process.

Highly qualified and trained operators carry out the semi-automatic or manual insertion of the coils into the stator and the connection of the output terminals.

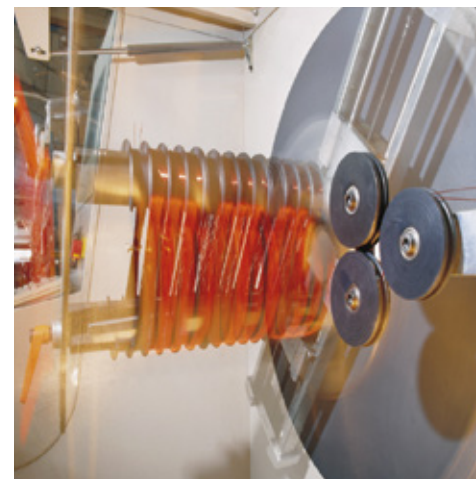

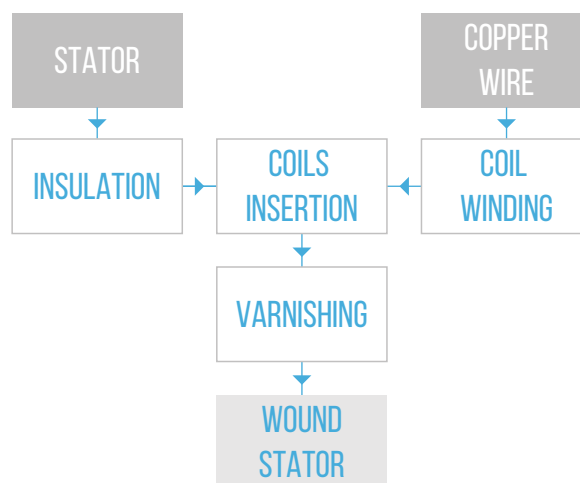

RESOURCES

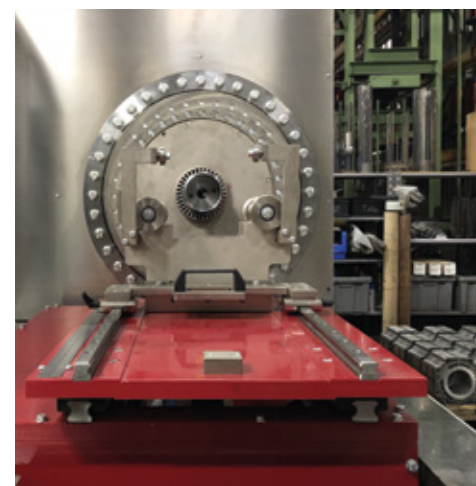

- Stator insulation machines
- Coil winding machines
- Coil insertion machines
- Vacuum pressure impregnations system
- Heat treatment furnaces

DEDICATED WINDINGS

The know-how acquired over the years allows us to develop and produce a wide variety of customized windings with maximum reliability.

1.
Automatic coils
winding machine

2.
Automatic stator slot
insulation machine

ASSEMBLY DEPARTMENT

_05

To satisfy the wide production range, the company is organized to produce different types of rotor shafts including induction in aluminum or with copper bars, permanent magnets and reluctance.

Specialized operators then proceed with the final assembly of the motor and related accessories such as blowers, brakes and encoders.

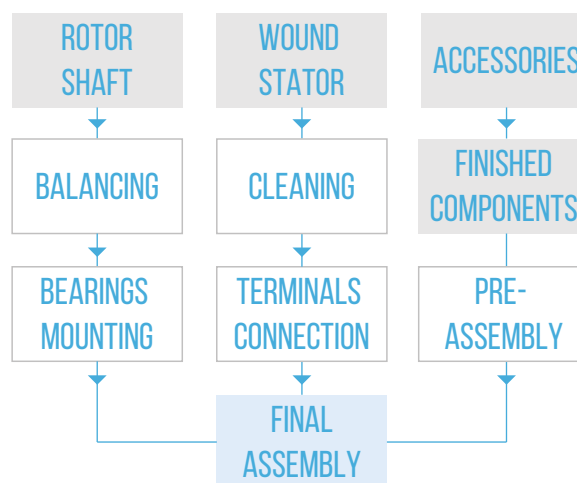

RESOURCES

- Rotors assembly department
- Shaft and bearings assembly department
- Automatic balancing machines
- Blowers and fans assembly
- Final assembly benches

FLEXIBLE CONFIGURATION

Depending on the application, motors can be equipped with different types of bearings including ball, roller, insulated and high-speed.

1.
Final assembly line of complete motors

2.
Encoders assembly and registration

TESTING DEPARTMENT

_05

A flexible and modular test room allows motor testing in a wide range of speeds and loads. In the department is possible to perform also complete heating test, thermal analysis and vibrations measurements during operations. All feedback systems and brakes are registered and tested after the assembly as well as the cooling circuit of liquid-cooled motors.

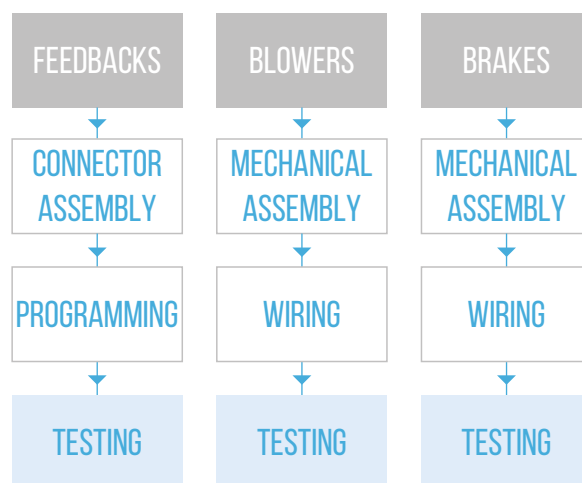

RESOURCES

- No. 3 independent test stand
- AC 3-phase brakes
- Regen drives (15 kW, 150 kW, 600 kW)
- Torquemeters (50 Nm, 500 Nm, 6000 Nm)
- Wattmeters (2000 A)

PRODUCT QUALIFICATION

It is possible to organize tests with certification authorities for the motor specific validation, for example related to marine or automotive industry.

1.
Tool for vibrations measurement

2.
Adjustable test bench with torque meter

QUALITY POLICY

06

QUALITY POLICY

The company has as its priority objectives:

CUSTOMER SATISFACTION

compliant with requests, respecting delivery times

CONTINUOUS IMPROVEMENT

of processes, services and working conditions

PROFESSIONAL GROWTH

through general and specific training plans

REGULATION COMPLIANCE

for the technical, legal and safety point of view

ISO 9001
BUREAU VERITAS
Certification

In order to achieve these objectives the company complies with a Quality Management System according to UN EN ISO 9001 requirements since 1999. Further details on our quality policy are available on our website.

CONTEXT ANALYSIS

To determine the needs and expectations of:

- customers
- suppliers
- internal staff
- external stakeholders

IMPROVEMENT PLANS

To set the targets in every activity:

- commercial
- design
- manufacturing
- supply and control

RISK ASSESSMENT

To evaluate factors that influence the established targets (risks and opportunities)

MANAGEMENT REVIEW

To monitor the results obtained and to establish future targets

PRODUCT QUALITY

_06

PRODUCT QUALITY

The company decades-long knowledge of the electric motor sector, the continuous investments made over the years and the specialization in customized and challenging applications provide the significant know-how that guarantees the highest levels of product quality.

PROPRIETARY R&D

100% in-house product development

DIRECT CONTROL

of the entire production process

COMPLETE OWNERSHIP

of structures, machines, equipment and tooling

DEEP KNOWLEDGE

of the product, market and applications

MATERIALS SELECTION

Use of high quality materials and components selected from the best industrial suppliers on the market. Research of new market technologies for continuous product improvement.

FEATURES

- Low losses magnetic laminations
- "Corona resistant" enameled copper wire
- Rare earth permanent magnets
- Patented insulating materials
- External accessories (bearings, encoders, brakes, blowers) selected from well-known European manufacturers
- High precision tools and machines

PROCESS CONTROLS

Dedicated quality control tools and procedures for the systematic inspection of parts, components and finished products. The test results are acquired digitally allowing for data traceability.

FEATURES

- Incoming material inspection areas
- Mechanical dimensions 3D measurement equipment
- High voltage insulation and PDIV testing machines
- End-of-line test panels
- Feedback systems programming and testing station

1.
Insulation and winding testing

2.
End-of-line testing station
